2010 SUMMER PROGRAM DATES

Session	Date	Age	Cost	# Participants
From the Forest to the Sea Science Day Camp*	June 14-18	8-11	\$175	18
Science Camp	June 21-25	12-14	\$425	12
Copper River Watershed Stewardship Program**	July 30-August 8	Grades 9-12	Please contact Lindsay	10
Ocean Science and Leadership Expedition	August 5-14	Grades 9-12	\$1100+ \$25 for 1 credit	10

* Run in partnership with the U.S. Forest Service/Cordova Ranger District.
 **Run in partnership with Copper River Watershed Project, Wrangell Institute for Science & Environment, Wrangell St. Elias National Park & Preserve, Bureau of Land Management, and Alaska Geographic.

HOW CAN I REGISTER?

Please visit our website

http://www.pwssc.org/education/summer/summer_welcome.html
 to download a registration form.

ABOUT OUR CAMPS

Our mission is to provide tools and guidance to campers to increase their understanding of the interdependence of all ecosystems. We combine experiential, hands-on environmental science education with positive experiences in the outdoors to build a foundation of knowledge and passion for campers to use as they grow into wise decision makers and good stewards of the land. Camp activities are exploration based, designed to help campers form a deeper awareness and understanding of the interrelated ecosystems of the area, while building personal connections to the environment and developing confidence and teamwork skills.

Our camp is located on the beautiful Copper River Delta and Prince William Sound regions of south central Alaska. The landscape provides an excellent classroom for participants to explore temperate rainforest, wetland, glacial, and marine ecosystems that make this area so diverse. With a student/teacher ratio of 4:1, we offer a high quality and personal learning experience for all of our participants. Campers attend from Cordova and other Alaskan communities, and throughout the United States.

Prince William Sound Science Center Education staff are also available to design specialized one or multi-day programs for interested community organizations. Please contact us for details and rates.

FROM THE FOREST TO THE SEA DAY CAMP

June 14-18 (Ages 8-11)

Science Day Camp is a great time to be active and have fun in the outdoors while learning about the amazing landscape that surrounds Cordova. Each day is filled with hands-on science activities, games and adventures.

During the week at camp we'll hike through the rainforest, observe glaciers up close, canoe through the wetlands of the Copper River Delta and explore Orca Inlet. By the end of the week you will be able to see for yourself that from the forest to the sea...it's all connected.

SCIENCE CAMP

June 21-25 (Ages 12-14)

Science Camp is filled with fun outdoor adventures and hands-on activities that let you explore everything from the forest to the sea and help you understand how it's all connected. Outdoor adventures include hiking, kayaking, canoeing, river rafting and glacier trekking. You'll also participate in a special project to help protect and restore salmon habitat. Nights will be spent at our field camp on the Delta and will be filled with evening camp activities, delicious meals, crafts and games.

WATERSHED STEWARDSHIP PROGRAM

July 30-August 8 (Grades 9-12)

Ten students from throughout the Copper River Watershed will be recruited to participate in this ten-day adventure through their watershed. The program engages future leaders of the region in an active exploration of their surroundings to learn about the history, ecology and future challenges facing the watershed and the wild salmon upon which they and their communities depend.

OCEAN SCIENCE AND LEADERSHIP EXPEDITION

August 5-14 (Grades 9-12)

OSLE is a ten-day intensive field course for high school students that includes a four-day sea kayaking expedition in Prince William Sound. You will work with local marine scientists and educators to learn about oceanographic principles and coastal and marine ecosystems through hands-on science activities. During a sea kayaking expedition near Columbia Glacier, you'll learn about the effects of climate change on marine systems, and see firsthand the effects of marine pollution while participating in a marine debris survey and beach cleanup. This challenging and adventurous course will develop your leadership and teamwork skills through wilderness experiences and active involvement in a small-group learning and living environment. You can earn college credit through the University of Alaska, Prince William Sound Community College.
